Bothlabatsatsi Group **Project Management**

- We provide a successfully proven approach of project management services related to development projects, from the earliest project identification and initiation phase through the design development and construction phase to the hand-over and post occupation phase.
- The timely delivery of the solutions required for optimizing, designing, scheduling and determining the feasibility of projects are vital. We manage our projects and project resources within a well-developed project charter framework.
We utilize “best of both” of the two world renowned projects management methodologies, namely: Project In a Controlled Environment (Prince2) and Project Management Body of Knowledge (PMBok).

Project Quality Management

Bothlabatsatsi Projects belief is that doing it right the first time is the best and most cost-effective way to manage quality and our business. Non-conformance to quality standards costs money and in the long term is of no benefit to anyone

Bothlabatsatsi also believe that the optimum balance is achieved when customers get the product with the quality characteristics best suited to the requirements of their end-use, and that “good” quality is relative, not an absolute.

We Measure, Track, & Report Quality

Bothlabatsatsi technical and sales staffs work closely with customers to determine both customer product and economic needs and jointly choose a product specification that will best meet those needs. Once the product selection process is complete and supply of the product to the customer is about to commence, Bothlabatsatsi quality personnel enter the customer profile and product specification into its quality tracking database at the applicable source manufacturing plant. The quality characteristics of shipments made to that customer thereafter are measured, tracked and reported against those in the data base.

Safety Management

Bothlabatsatsi Management and staff are committed to ensuring a healthy and safe working environment for both our clients and our staff in our engagements. Permanent Health and Safety Officers are allocated to our larger sites. Smaller sites are visited regularly by “roaming” HSO’s, in order to assist site managers with the SHEQ requirements. When setting up Steering Committees for all our engagement, we also ensure that necessary health and safety committees are in place; our staff is represented in such committees.

Health and Safety Policy

Our policy is to take all practical steps to ensure the health and safety of our employees and our clients as well as reduce losses. To achieve and maintain these objectives all employees are required to commit themselves to:

- Bothlabatsatsi Safety standards; active participation in the implementation as per our Standard Safety policy and procedures;
- Contributing to a safe working environment;
- Contributing to a productive and efficient working environment; and
- Avoiding wastage through good housekeeping and order, and publicly supporting the Bothlabatsatsi Health and Safety program.

Our company fully supports the Safety Management Program and will value achievements in quality and efficiency. Provision of safety equipment and training to all employees ensures an effective program.

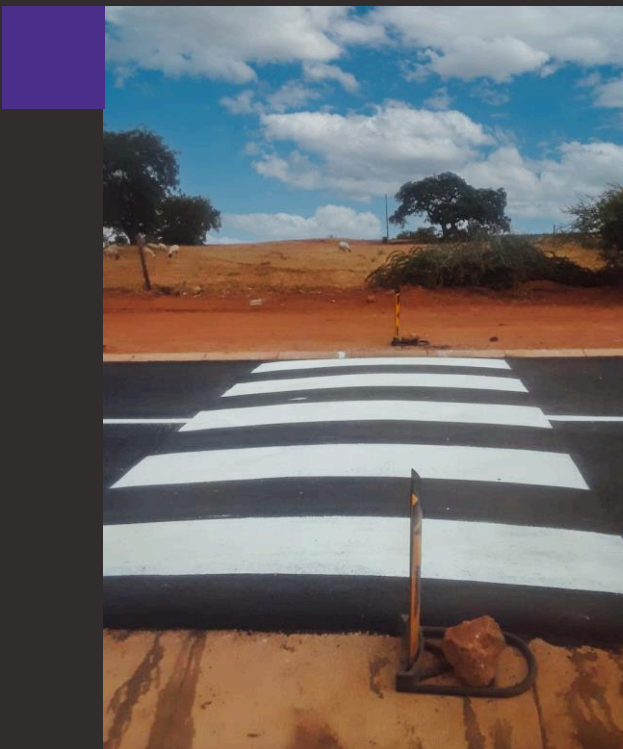

RISK Management

Bothlabatsatsi uses Risk Analysis and Risk Assessment methods to facilitate informed decision-making related to a range of mining and environmental projects. Each decision taken within the management cycle is a result of the risk management optimization process of identifying, assessing, and controlling the risks.

By implementing appropriate risk analysis and risk assessment methods we provide state-of-the-art solutions to challenges faced by our clients. Services include:

- Risk analysis;
- Risk assessment;
- Gap analysis;
- Cost-benefit analysis; and
- Decision analysis.

We always make effort to manage all the risks in time before they become issues, which may require more resources to resolve.
